DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informalities:
 - Page 4, line 20, replace "Figure 3" with -- Figures 3(a) to 3(e) --. Appropriate correction is required.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
3. Claims 1-5 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
4. Claim 1 recites the limitation "the wound portion" in last line. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.
6. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein

were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

7. Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nuss in view of Katagiri et al. (6,170,146).

Regarding claim 1, Nuss shows all of the limitations of the claimed invention including a connective portion between the both ends of each of said wound wires and the corresponding commutator leg part is formed by winding a wire stripped of its insulating coat except for welding the wound portion.

Katagiri et al. shows the wound portion being welded for the purpose of making an electrical connection.

Since Nuss and Katagiri et al. are all from the same field of endeavor; the purpose disclosed by one inventor would have been recognized in the pertinent art of the others.

It would have been obvious at the time the invention was made to a person having ordinary skill in the art to weld the wound portion as taught by Katagiri et al. for the purpose discussed above.

Regarding claims 2 and 3, it is noted that Katagiri et al. also show all of the limitations of the claimed invention.

8. Claims 4 and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nuss in view of Katagiri et al. (6,170,146) as applied to claim 1 above and further in view of Okuyama et al.

Regarding claims 4 and 5, the rotor of Nuss modified by Katagiri et al. shows all of the limitations of the claimed invention except for a lower melting point than that of copper (the use of phosphor bronze).

Okuyama et al. shows the use of metal with lower melting point than that of copper for the purpose of increasing the efficiency.

Since Nuss, Katagiri et al., and Okuyama et al. are all from the same field of endeavor; the purpose disclosed by one inventor would have been recognized in the pertinent art of the others.

It would have been obvious at the time the invention was made to a person having ordinary skill in the art to use phosphor bronze as taught by Okuyama et al. for the purpose discussed above.
